Study Date 01/25/22
Report # 2187812

Patient Ransom, COON'S RANSOM MAXINE
Sex Female **Age** 1y 6.00m **Weight** 10.00 lbs.
Study Plain Film/X-Ray: Pelvis, Hip Right, Hip Left
History WANTS HIPS EXAMINED

Owner April

Patient ID 36235

Species Feline

Breed Maine Coon

Req. Type Routine

Findings

2 radiographic images of the pelvis and pelvic limbs are available for evaluation. There is bilateral hip incongruity. The femoral heads are normal in shape. There is mild bony remodeling involving the acetabulum and the cranial most aspect of the femoral necks. There is no evidence of osteolysis. The femurs are normal in margination and alignment. The patella is normal in positioning. The articular surfaces of both stifle joints are normal. There is no evidence of stifle joint effusion.

No visible abnormalities are seen in the caudal abdomen.

Conclusions

Mild hip laxity with suspected minimal degenerative changes. Otherwise, the pelvis and pelvic limbs appear normal.

If you would like additional information regarding specific treatment recommendations for this case please submit an additional request for an internal medicine consultation. Please make sure you apply the same patient identification number to the request.
